

A Visual Aide for One Type of Kitless Configuration. (by Martin Osborn - MartinPens)

Start with 6" blank. Cut for 4" body and 2" cap
This is just a general length reference for starters.

Use a section from a Churchill, El Grande kit, or, make your own section (we didn't cover this)

This part of the cap end can be recessed with a drill bit to accommodate the clip.

We will cover how to make a section at a later date. You can look at Youtube and in the IAP library for help in getting started with making a section.
