"Golden Ratio" Calipers (Phi Calipers)

Mathematically, the 'golden ratio' is the ratio of two lengths, L1 and L2, where:

$$L_1 \qquad L_2 \qquad \text{and} \quad \frac{L_2}{L_1} = \frac{L_1 + L_2}{L_2}$$

When this condition is met, the ratio of the two lengths, I_2/L_1 is 1.618. A Φ caliper is a tool that divides a physical length into segments that have this ratio.

Calipers consist of four pieces, two of which are identical.

Start with four strips of material. Each strip should be about 1/8 - 3/16'' thick and $5/8 - \frac{3}{4}''$ wide. The length of these strips depends on the intended size of the final caliper. The design shown here is based on the principle of a 'base dimension', designated X (in either inches or mm). The approximate starting length of the four strips of material should be (2.618 X + 3/4''). For example, objective is a caliper that is about 8'' long, the base dimension, X, would be 3'', and the starting length of the four strips would be about 8 $\frac{1}{2}$ ''.

- 1. After milling the four strips, tape them together, and shape the pointed end
- 2. Drill a ¼" hole (the center hole) exactly 1.618 X from the tip of the pointed end
- 3. Drill a second $\frac{1}{4}$ " hole X" away from the center hole.
- 4. Shape the rounded end of the strips around that second hole
- 5. Remove the tape, and set aside two of the strips. These are 'Part A" and are ready for sanding and finishing. The two remaining strips will become parts B and C.
- 6. Tape parts B and C together. Drill a third ¼" hole exactly X away from the center hole in the direction of the point, then remove the tape.
- 7. On Part B, cut off the rounded end, and round over the cut end around the center hole.
- 8. On Part C, cut off the pointed end, and round over the cut end.
- 9. Sand all four parts, and apply the desired finish.
- 10. Assemble the caliper using ¼" "Chicago screws" (aka 'binder posts'). Place a nylon or polyethelene washer between the parts to facilitate smooth rotation. If you can't find Chicago screws, you can use ordinary machine screws and nuts.
