Wood Threading Kit

Warning: Expert Use Only

1. Do not use this kit on any material that is not made of wood. (This is a warning to prevent damage to the kit and the material being threaded.)

2. Do not use this kit on any material that is not made of wood. (This is a warning to prevent damage to the kit and the material being threaded.)

3. Do not use this kit on any material that is not made of wood. (This is a warning to prevent damage to the kit and the material being threaded.)

Robert Sorby Universal Indexing System 763 & 763/Carb

The Robert Sorby Universal Indexing System has been developed for the turner to allow the exploration of ideas and designs that are only possible with some form of accurate dividing head. The indexing head is placed in three ways - the wheel can be trapped behind a protector. This has been done so as to allow an approach to be taken whether it be for brass or steel.

The indexing assembly is fitted to a lathe bed (as shown in the picture below) and is manufactured until the locating arm engages.

The indexing assembly has been developed for the turner to allow the exploration of ideas and designs that are only possible with some form of accurate dividing head. The indexing head is placed in three ways - the wheel can be trapped behind a protector. This has been done so as to allow an approach to be taken whether it be for brass or steel.
